Summary

I am a MERN Stack Developer with 3+ years of experience in React. I have a strong foundation in front end & back-end development and am skilled in creating user friendly and responsive web applications using React and its ecosystem. In addition to my technical skills, I am a strong communicator and team player besides excited to continue growing as a developer and making meaningful contributions to projects and teams.

Featured Projects

Pedagon E-learning Platform

Edutech E-Learning Academy is a platform that provides soft and hard skills education to students of all ages. I built the frontend using React js and Tailwind css. It was designed with Figma. It includes:

- Admin panel – used for managing online registrations.
- The Direct Admission Submission form allows users to easily apply for admission.
- Responsive design – ensuring optimal user experience on a variety of devices and screen sizes.
- The real-time class course update module is powered by Sanity, providing timely and accurate information on course offerings.
- All forms on the website are validated using the getform API to ensure the accuracy and completeness of the information submitted.
- Duration: The development of the Educare English Learning Academy website took approximately a month to complete.

Cyber Security Blog

A personal cyber security blog for sharing knowledge on topics such as network security, malware protection, and data encryption. The blog includes articles, tutorials, and YouTube videos on these topics, as well as resources and tools for readers. It includes:

- Real-time personalized articles submission ensures that users are served relevant content based on their interests.
- Responsive design – ensuring optimal user experience on a variety of devices and screen sizes.
- Data rendered using Next Link and Next Router which allows for efficient and seamless navigation between pages and content on the blog.
- Live and real-time comments powered by Sanity.io: This allows users to engage with each other and the content in real-time, fostering a sense of community on the blog.
- YouTube linked video section with player for interactive element to the blog and allows users to watch videos directly on the site..

Work Experience

- **Teens Can Code - Frontend Web Developer**
2022 - present
My role is to develop products for the company, maintain them and mentor interns. Products I built included websites, Online Safety Awareness and Resource platform, etc
